

Tris(2,2,2-trifluoroethyl) phosphate (TFEP)

FLUORINATED PHOSPHATE ELECTROLYTE SOLVENT / FLAME-RETARDANT COSOLVENT

PRODUCT OVERVIEW

Tris(2,2,2-trifluoroethyl) phosphate (TFEP) is a fluorinated phosphate electrolyte solvent and cosolvent used in lithium-ion battery electrolyte research, particularly in formulations targeting reduced flammability and improved thermal safety. Its fluorinated phosphate structure makes TFEP useful for evaluating reduced-flammability and flame-retardant electrolyte systems, including blends with conventional carbonate solvents.

Electrochemical compatibility and optimum concentration depend on the electrode chemistry and complete electrolyte formulation.

CAS No. 358-63-4 | Formula $C_6H_6F_9O_4P$ | Abbreviation TFEP

TECHNICAL SPECIFICATIONS

PROPERTY	SPECIFICATION	REPRESENTATIVE RESULT
Appearance	Colorless liquid	Colorless liquid
Purity	≥ 99.0 wt%	99.5 wt%
Moisture	<200 ppm	85 ppm

QUALITY / DOCUMENTATION

Lot-specific Certificate of Analysis and SDS are available upon request.
